Green
SOLUTIONS
Since 1975

We at DEL Ozone are committed to bringing you environmentally friendly products to help you reduce your environmental impact.

Ozone is the healthiest, safest and greenest product you will ever use in your pool or spa.

Proven to kill up to 99.99% of bacteria, viruses and molds found in pools as well as other organic contaminants, the only by-product of ozone disinfection is oxygen. The most powerful, naturally-occurring oxidizer that can safely be used in a swimming pool or spa, ozone is faster, safer and 200 times more effective than chlorine. Chlorine produces a by-product called chloramine which is known to form trihalomethane (a suspected carcinogen). Ozone prevents or destroys chloramine formation in pool and spa water, while having no negative effect on pool water balance (pH, total alkalinity or calcium hardness).

EPA approved as an antimicrobial disinfectant

FDA approved as an antimicrobial food additive, improving food safety

USDA approved as an organic food additive

EPA listed as safe for discharge into surface and ground water

DEL Ozone™

EPA Estab. No. 071472-CA-001
