

## Cloudy Water

Cause	Solution
<b>Chloramines</b> — Caused by chlorine combining with swimmer waste	Treat the pool with a chlorine-free shock of your choice. Then add <b>SeaKlear Natural Clarifier</b> or <b>SeaKlear PRS</b> according to directions.
<b>Organic Waste</b> — Caused by environmental debris	Skim and vacuum the pool. Use a chlorine-free shock then add <b>SeaKlear Natural Clarifier</b> or <b>SeaKlear PRS</b> according to directions.
<b>Mud and Silt</b>	Treat with <b>SeaKlear Rescue Klear</b> or <b>SeaKlear PRS</b> according to directions.
<b>High Alkalinity</b>	Treat pool with muriatic acid added according to manufacturer directions.
<b>High pH</b>	Treat with <b>SeaKlear Rescue Klear</b> or <b>SeaKlear PRS</b> according to directions.

## Cloudy Water

Cause	Solution
<b>High Total Hardness</b> - Calcium levels over 400ppm	Drain some or all of the pool water. Test calcium levels in fill water and treat with a hardness reducer if necessary before refilling.
<b>High Total Dissolved Solids(TDS)</b> - TDS levels over 1500 ppm	Backwash or drain the pool.
<b>Poor Filtration</b>	<b>Check the Filter.</b> Clean or backwash the filter according to manufacturer instructions.
<b>High Phosphates</b> - Good phosphate levels are below 220ppm	Treat with <b>SeaKlear Phosphate Remover CR</b> or <b>SeaKlear Free &amp; Klear</b> according to instructions.
