

YELLOW OUT & GREEN To CLEAN

The pool industry's best kept secrets

BEFORE

DO NOT MIX
IN PAIL

1

ADD PRODUCT
ONLY INTO POOL!
WAIT 5 MINUTES...

2

AFTER 5 MINUTES,
ADD CHLORINE
ONLY INTO POOL!

3

AFTER 12 AND 24
HOURS, ADD CHLORINE
ONLY INTO POOL!
DONE.

Amazing clean up results when used prior to shock treatment with an EPA-registered chlorine compound that kills green or yellow algae--often without the need to brush.

Yellow Out & Green to Clean work great for all pools, including those with salt chlorine generators and plaster finishes. Both of these circumstances can create a higher pH in pool water (especially newer plaster), which happens to be the ideal condition in which Coral Seas products work. The recommended pH level is 7.8 or higher for ideal performance. This is opposite of traditional algae treatment methods which require a lower pH for chlorine to be more efficient. Green to Clean and Yellow Out are also not affected by higher levels of cyanuric acid.

- **Scrub free pool clean-up**
- **Typical results occur in 24 hours**
- **Add 2lbs per 15,000 gallons of pool water**
(see label for complete instructions)

NOTE: Before and after images are of a customer's pool in Kansas City, MO. The pool is equipped with a sand filter and liquid chlorine was used along with the Coral Seas product. The transformation occurred in 24 hours and all of the steps on the label were followed closely.
