

App chemistry for your smart phone

MEASURE

Free Chlorine

Bromine

Alkalinity

pH

Insta-LINK FEATURES

- Use your Smartphone to take a quick photo of your Insta-Test 3® strip or manually enter the test results and have it professionally analyzed over the internet.
- Manual entry is ultra fast using a simple slide bar to select numbers.
- Treatment recommendations are based on industry standards for Chlorine, Bromine, pH and Alkalinity.
- No more writing down results or guessing at chemical additions and retesting.
- Simply enter your pool or spa volume, sanitizer type and select a test method to either photograph a strip or enter results manually.
- History feature allows you to view data graphs and keep records for the last 30 days.
- A simple tutorial will show users how to photograph a strip, enter data, tips on getting the best results, and more background on pool chemistry.

The Insta-LINK App can be downloaded
from your Smartphone App store.

The Insta-LINK App program (initial release for iPhone and iTouch) allows Smartphone owners to photo-scan an Insta-Test® 3 pool and spa strip which eliminates the need to visually determine slight color variations. The test results for Free Chlorine, Bromine, Alkalinity and pH are immediately analyzed using the WaterLink® DataMate software engine; a mainstay of pool professionals since 1987. In just a few seconds the program will diagnose water conditions and rapidly return a treatment recommendation. Also, the program allows the user to manually enter results with your own test strip or kit.
