

# Water-Wand Hand Held Cartridge Filter Cleaner

**What it does:** At last a cartridge filter cleaning device that takes the time, hassle and mess out of cartridge filter maintenance. **It cleans in minutes!**

**How the product works:** Eight fingers (pleat separators) are inserted into the cartridge to open eight pleats at a time in one simple action. Eight 180 degree fan nozzles are located at the base of each pleat separator. These nozzles spray a radius of water to then flush and clean both sides of each pleat in one easy downward motion. Water-Wand is operated off a standard garden hose and features on/off control at the hand grip.

**Features:** Multiple pleat separators and fan nozzles for faster cleaning, spray back guard, rubberized hand grip for comfort, on/off control, "threaded" or "quick connect" garden hose attachment options, rugged polymer construction.

**Key Selling Points and Consumer Benefits:** \* Dramatically reduces the time required to clean a filter cartridge, \* Reduces water consumption required to clean the cartridge by more than 50%, \* Eliminates the spray back of contaminated water onto the person cleaning the cartridge, \* Greatly reduces the hassle involved attempting to open cartridge pleats for a thorough and deep clean.

**Special Instruction:** Ensure garden hose connection is tight and secure. A loose garden hose connection will cause consumers to incorrectly assume the product is leaking. Works best with good garden hose pressure and in conjunction with a cartridge degreaser.

**Age Limitations:** None
